

Regional Network

National report

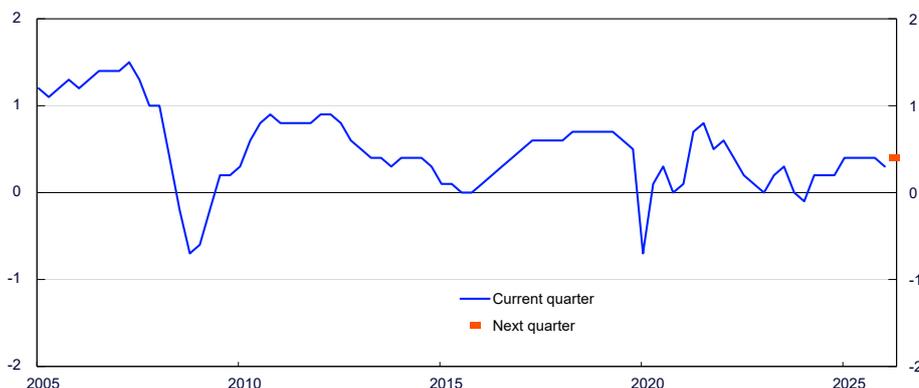

Minor changes in growth prospects

Norges Bank's Regional Network contacts expect minor changes in output growth in the period to summer. Growth prospects have improved on the back of defence investment, energy supply development and higher expected household demand. However, the completion of projects initiated in response to the petroleum tax package and low activity in building construction are dampening growth. The share of contacts reporting full capacity utilisation has edged down slightly since the previous survey, and there are slightly fewer contacts facing recruitment difficulties. Contacts expect annual wage growth of 4.2% in 2026 and 3.9% in 2027.

While Regional Network Contacts overall expect growth to be slightly lower in 2026 Q1 than in 2025 as a whole (Chart 1), they expect growth to pick up again in Q2. This primarily reflects the expectation among retail trade contacts that growth will dampen substantially in Q1 but pick up in Q2 (Chart 2). With the exception of oil services, all sectors expect activity

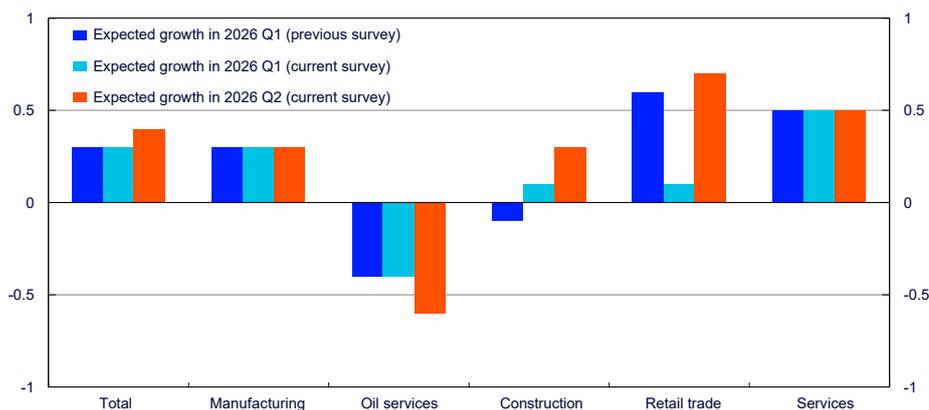

Figur 1 Total output growth

Expected growth current quarter and next quarter. Seasonally adjusted. Percent

Figur 2 Output growth. All sectors

Expected growth current quarter and next quarter. Seasonally adjusted. Percent

levels to increase in the period to summer. This entails a slight improvement in construction prospects compared with the previous survey.

Car sales are dampening retail trade in Q1

In retail trade, contacts expect growth to be weak in 2026 Q1 but to pick up in Q2. The introduction of higher VAT on electric cars from 1 January 2026 led to a sharp increase in car sales towards the end of 2025, while very few cars have been sold in 2026 Q1. Many contacts expect sales to pick up significantly in the period to summer. Overall, retailers of other consumer durables such as furniture and electrical appliances expect growth ahead. Prospects for contacts that sell consumer non-durables are also positive. Many contacts that sell building materials report low sales, although some expect more rehabilitation projects to generate growth ahead.

In household services, contacts expect growth to decline somewhat from the preceding surveys. After several years of strong growth in tourism, many contacts now expect growth to slow. In spite of the krone appreciation in recent months, many contacts report that the krone exchange rate continues to have a positive effect on demand. However, some hotels report stronger competition from Airbnb. Among tourism contacts interviewed after the outbreak of hostilities in Iran, some report cancellations and deferrals, particularly from Asian customers. At the same time, a number of contacts emphasise that Norway's reputation as a safe destination may strengthen growth ahead. Health and wellness contacts report increasing demand, and culture and entertainment contacts report higher visitor numbers.

Activity in defence and energy supply is sustaining growth in commercial services.

Growth in commercial services was fairly steady through 2025, and contacts expect the same pace in 2026 H1. Contacts report sharp growth

in security and contingency preparedness services. Energy supply projects are also boosting growth for many contacts. By far the strongest growth is among IT and other consultancy services that facilitate the use of AI among clients. Other contacts report that customers perform an increasing share of tasks themselves rather than pay for contract personnel and consultancy services. Low new-build activity dampens growth in logistics, architecture and a wide range of consultancy services. In commercial real estate (CRE), service providers report relatively stable turnover and leasing, and some report that customers are increasingly cautious and cost conscious. However, operation and maintenance activity is increasing.

Construction contacts expect activity to increase somewhat in 2026 H1.

Activity among many construction contacts is low, but contacts now expect some pickup over the course of 2026 H1. Housing construction contacts expect higher activity in South-West Norway but see few signs of improvement in the rest of the country. High construction costs continue to dampen construction of new homes, commercial building and public buildings, and many projects are being postponed. At the same time, activity in rehabilitation and maintenance is picking up, and a number of contacts report that both private and public-sector entities are prioritising upgrades over newbuilds. Some of them also report that many local governments have a substantial investment backlog and are therefore forced to carry out some of the projects in spite of weak finances and high construction costs. As in previous surveys, government construction projects are boosting activity among a number of contacts and some report that energy supply development and new data centres are lifting prospects.

Manufacturing contacts expect stronger growth in the domestic market

Manufacturing contacts expect higher activity in the period to summer both in domestically oriented manufacturing and in the export industry. For the first time since the start of 2021, the growth outlook is stronger in the domestic market than in the export market. In recent years, building materials manufacturers have reported declining output volumes. Relatively few manufacturers currently expect a further decline in volumes, and a fairly large number expect an increase in the period to summer. At the same time, some export firms report increased international competition, particularly from Asian manufacturers, and some report weak economic growth in a number of the European markets. A few export firms fear that the krone appreciation this winter will dampen their competitiveness. Some energy-intensive manufacturers are considering a reduction of output volumes owing to high energy prices. However, a number of contacts have entered into favourable fixed-price contracts and will not reduce output until energy prices have remained high over a long period. Manufacturing contacts expect increased defence investment, energy supply development and deliveries to the aquaculture industry to boost growth ahead.

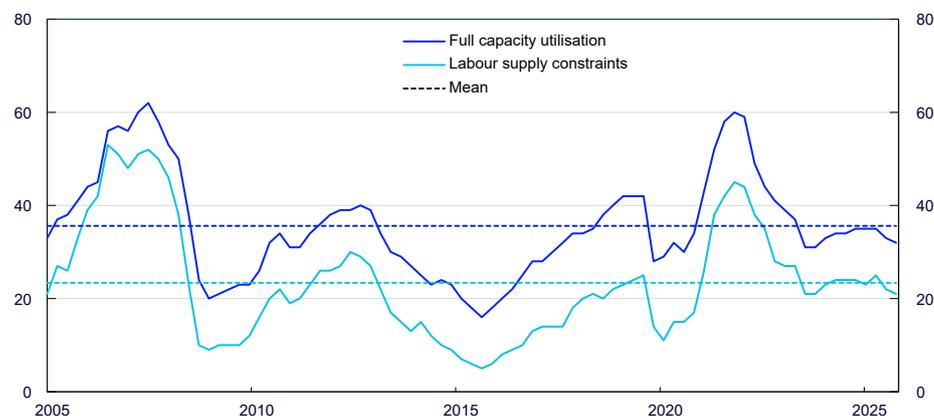

The completion of many projects initiated in response to the petroleum tax package is dampening activity on the Norwegian continental shelf. At the same time, many contacts report increased activity related to operations and maintenance, which is dampening the decline in activity in 2026 H1. Oil service exporters expect further growth through the first half of the year, and a number report increasing order volumes from eg West Africa and Brazil. A number of contacts, however, fear that the stronger krone may dampen growth ahead. Oil services contacts interviewed after the outbreak of hostilities in Iran report that higher oil and gas prices will have little impact on activity in the near term.

Slight decline in capacity utilisation

In this survey, 32% of contacts report full capacity utilisation (Charts 3 and 4). The capacity utilisation indicator has gradually moved down over the past six months to slightly below the historical average. Contacts are also asked about their capacity utilisation relative to a normal level, and

Figur 3 Capacity utilisation¹ and labour supply constraints²

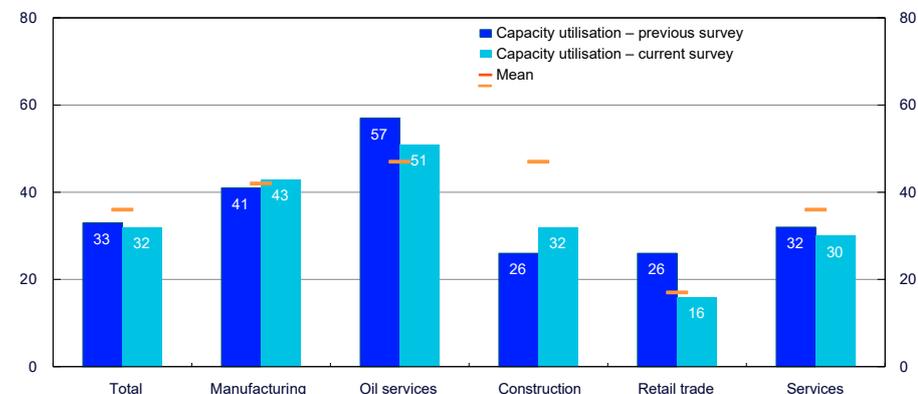

Percentage shares

- 1 Share of contacts that will face some or considerable difficulty increasing output/sales without committing additional resources such as labour or machinery.
- 2 Share of contacts citing shortage of labour as a constraint on production/sales. The question about labour is asked only of the enterprises reporting full capacity utilisation, but the series shows the share of all contacts included in the interview period.

Figur 4 Capacity utilisation¹

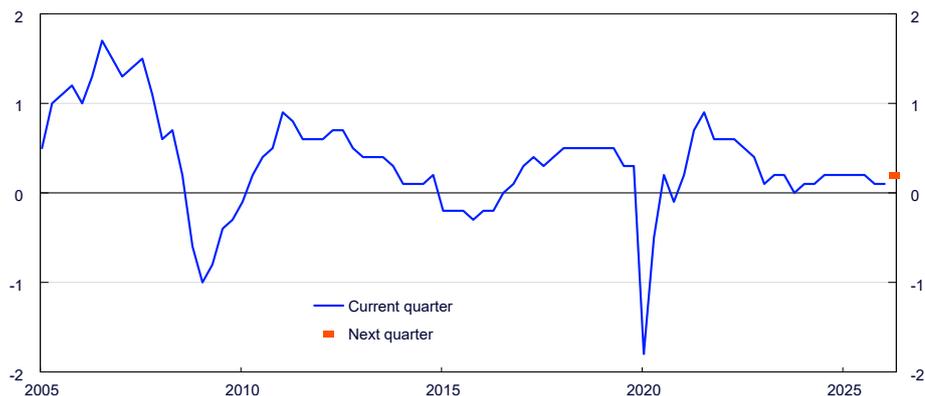

Percentage shares

- 1 Share of contacts that will face some or considerable difficulty increasing output/sales without committing additional resources such as labour or machinery. The shares in the different sectors do not necessarily sum up exactly to the aggregated shares due to rounding.

Figur 5 Total employment growth

Expected growth current quarter and next quarter. Seasonally adjusted. Percent

most report normal levels. A slight majority of the remaining contacts report lower-than-normal capacity utilisation. In addition, some contacts report that recruitment difficulties have eased slightly, and this share has fallen to 21%, slightly below the historical average for this indicator. Nevertheless, some types of expertise are more difficult to recruit than others, and contacts across sectors report somewhat constrained capacity owing to shortages of experienced engineers and skilled workers.

Weak employment growth

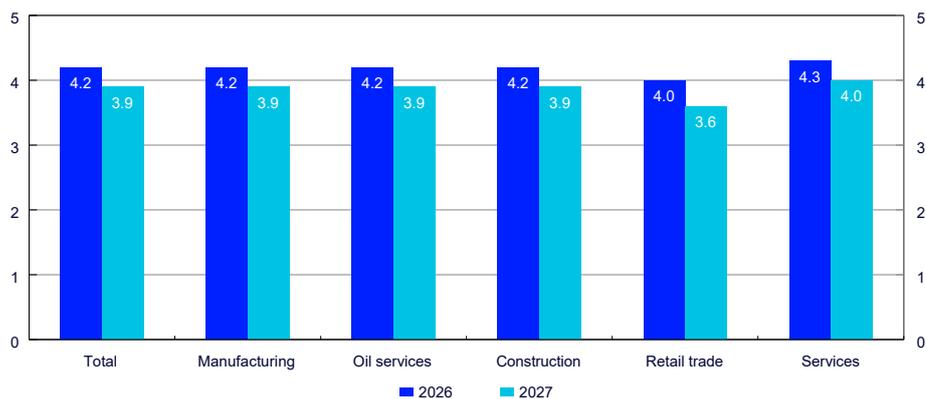

On the whole, Regional Network Contacts expect weak employment growth in 2026 Q1, and expectations are little changed since the previous survey (Chart 5). At the same time, contacts expect employment growth to pick up slightly in 2026 Q2. Only oil services contacts are planning workforce reductions ahead owing to lower expected activity. Construction contacts expect employment growth from Q2. At the same time, a number of contacts emphasise that capacity utilisation is low and that they can increase output somewhat before hiring will become necessary. In other sectors, contacts plan to increase staff numbers. In this survey, contacts were asked about the impact of AI on their labour demand. Their responses indicate that although AI had a fairly neutral impact in 2025, it is expected to have a dampening effect in 2026, particularly among large firms. The responses also suggest that demand for entry-level employees is being reduced the most.

Minor changes in annual wage growth projections

Contacts expect annual wage growth of 4.2% in 2026 and 3.9% in 2027 (Chart 6). The projection for 2026 has been revised up slightly since the December survey. Many contacts point out that the wage settlement in manufacturing will provide the norm for their wage growth. Among manufacturing contacts, a number report that fierce competition for experienced engineers and other technical experts is pushing up wage

Figur 6 Annual wage growth

Expected annual wage growth. Percent

expectations. In addition, some contacts report that higher inflation in recent months may lift wage growth in 2026.

Services and manufacturing underpinning investment

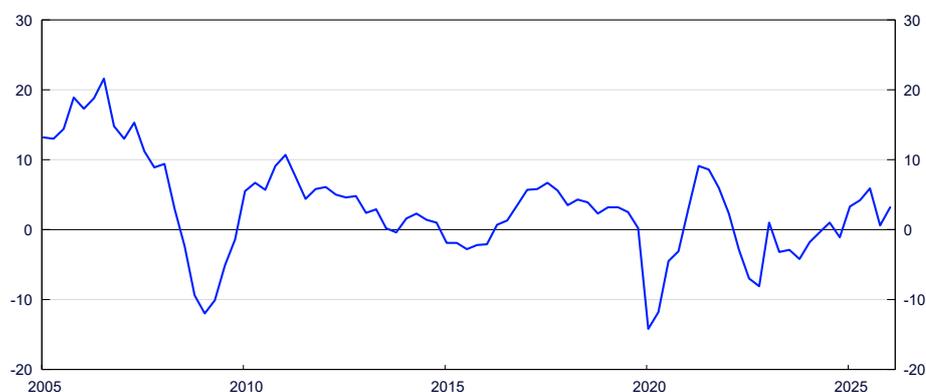

Contacts expect investment to increase in 2026, and to increase in 2027 at a slightly slower pace. Services and manufacturing in particular are lifting growth expectations in 2026. Among contacts making investments, the need for increased manufacturing capacity and IT system upgrades is emphasised. Some CRE contacts report signs of improved profitability in leasing, particularly in areas with a solid rise in rents, which may lead to higher CRE investment ahead. A number of contacts expect that new data centres will boost investment in 2026 and 2027.

Somewhat better profitability

Overall, profitability among contacts is somewhat higher than at the same time last year (Chart 7). Construction contacts report little change in profitability, which remains at a low level. At the same time, cost-cutting

Figur 7 Overall profitability growth

Change in operating margin in the current quarter compared with the same period one year earlier. Percent

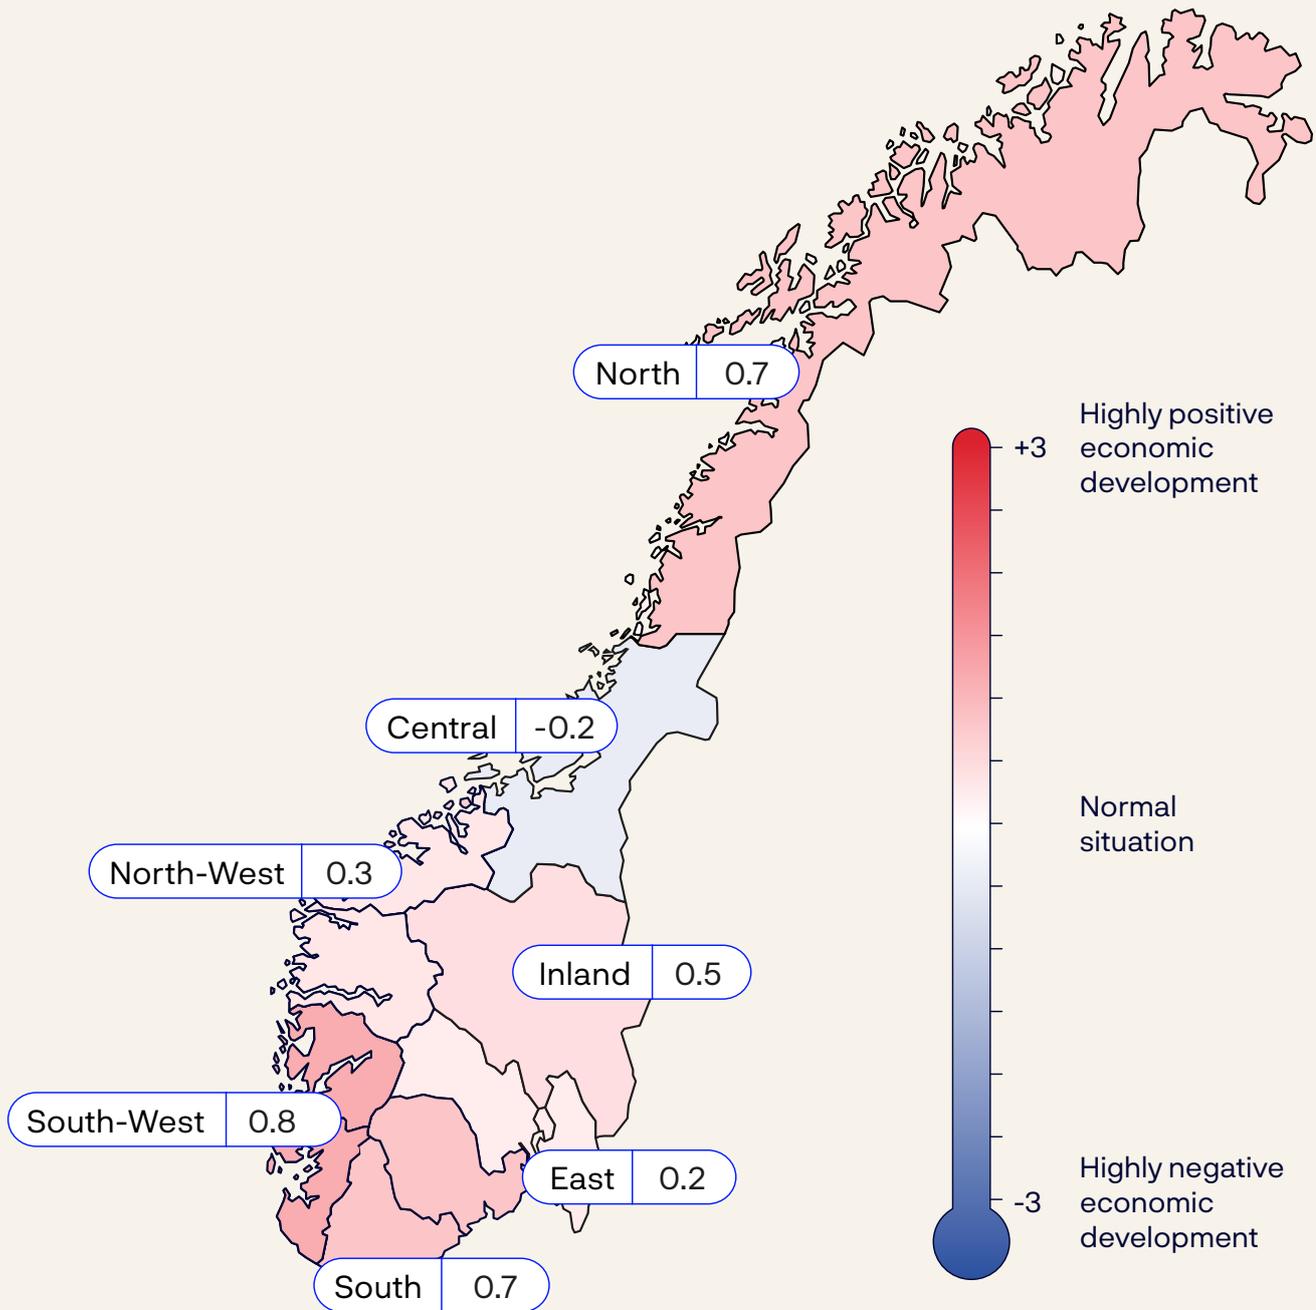

measures, such as reducing the number of permanent and contract staff, have helped prevent further decline in profitability. In oil services, profitability is falling from a high level in pace with the decline in activity, while capacity utilisation is reduced. In the other sectors, contacts report slightly higher profitability.

The economic situation has improved in most parts of Norway.

Contacts are asked, on a scale from -3 to +3, how they would rate the economic situation of their enterprise in terms of demand, profitability and prospects. A value of zero indicates a normal situation. The regional indicator is an average of the responses in the individual region. In this survey, all regional indicators are positive, with the exception of region Central, where the indicator is slightly negative and down from the previous survey. On the whole, low construction activity is pulling down the regional indicator in region Central. At the same time, regional indicators have picked up from the previous survey in the majority of regions, in particular in regions North and Inland, both boosted by an increase in tourism. As in the previous surveys, contacts in region South-West continue to report the strongest economic conditions, supported in particular by energy sector activity and data centre construction. Some contacts also point to favourable housing market prospects.
