Management of the foreign exchange reserves

The foreign exchange reserves are to be sufficiently liquid to be available for use in foreign exchange market transactions as part of the conduct of monetary policy or with a view to promoting financial stability and to meet Norges Bank's international commitments. The aim of the management of the foreign exchange reserves is the highest possible return within the applicable limits.

Composition

The reserves are divided into an equity portfolio, a fixed income portfolio and a petroleum buffer portfolio. The foreign exchange reserves may be invested in cash deposits, Treasury bills, government bonds and equities listed on a regulated and recognised exchange.

The fixed income portfolio's benchmark index is a market-weighted index of all nominal government bonds with a residual maturity of between one month and 10 years issued in local currency by China, France, Germany, Japan, the UK and the US.

The equity portfolio's benchmark index is a market-weighted, tax-adjusted global equity index for medium and large-sized companies limited to nine currencies. The strategic equity allocation of the total equity and fixed income portfolio is 20%.

The petroleum buffer portfolio is intended to receive foreign currency from the State's Direct Financial Interest (SDFI) in petroleum activities and transfers from the Government Pension Fund Global (GPFG), as well as to smooth the government's need for converting foreign currency and NOK. The petroleum buffer portfolio is invested in short-term fixed income instruments. No benchmark index has been set for the petroleum buffer portfolio.

CHART 1 Composition of the foreign exchange reserves

Market value of each portfolio at year-end and 2026 Q2. 2017—2026. In billions of NOK

NOK 763.0bn

in market value

International currency

The foreign exchange reserves are held for contingency purposes. Movements in the krone exchange rate will affect Norges Bank's equity but not the Bank's ability to meet commitments in foreign currency. The petroleum buffer portfolio, which is not held for contingency purposes, is excluded from the measurement of return in international currency terms.

Foreign exchange reserves

The market value of the foreign exchange reserves was NOK 763.0bn at the end of 2026 Q2, an increase of NOK 27.6bn in Q2. The return in international currency terms increased the value of the equity and fixed income portfolio by NOK 24.7bn, while a weaker krone increased the value by NOK 9.2bn. Net transfers to the equity and fixed income portfolio amounted to NOK -8.4bn.

The value of the petroleum buffer portfolio increased by NOK 2.1bn. In NOK terms, the return amounted to NOK 1.6bn, while net transfers totalled NOK 0.5bn.

CHART 2 Change in market value

In billions of NOK. 2026 Q2. Positive values indicate purchase/inflow of foreign exchange while negative values indicate sale/outflow.

Funding dividends to the government

The Executive Board has decided to purchase NOK to fund the transfer of dividends and interest to the government for the 2025 financial year, totalling NOK 29.4bn. In 2026 Q2, NOK 124m was purchased daily by selling foreign currency, amounting to NOK 7.2bn.

US US yields ended 2026 Q2 higher. The two-year government bond yield rose by close to 40 basis points, while the 10-year yield rose by 15 basis points. The Federal Reserve made no changes to its monetary policy stance but signalled that its policy rate could be raised later this year. Investments denominated in USD earned a return of 0.3% in Q2.

0.3%

return on USD investments in 2026 Q2

Europe European yields fell by just under 10 basis points in the course of 2026 Q2. The European Central Bank (ECB) raised its policy rate to 2.25%. The ECB signalled that the outlook is uncertain, but that risk is to the upside for inflation and to the downside for growth. The ECB stated that its monetary policy stance ahead will continue to depend on developments in key figures on a meeting-by-meeting basis. Investments denominated in EUR earned a return of 1.4% in Q2.

1.4%

return on EUR investments in 2026 Q2

UK UK government bond yields ended 2026 Q2 lower. The two-year yield fell by 25 basis points and the 10-year yield by 11 basis points. The Bank of England kept its policy rate unchanged at 3.75%. Investments denominated in GBP earned a return of 1.8% in Q2.

1.8%

return on GBP investments in 2026 Q2

Japan The Japanese 10-year government bond yield rose by just over 30 basis points in 2026 Q2, while the two-year yield was little changed. As expected, the Bank of Japan raised its policy rate by 25 basis points in June. Investments denominated in JPY earned a return of -0.1% in Q2.

-0.1%

return on JPY investments in 2026 Q2

China Chinese government bond yields fell slightly in 2026 Q2. The two-year yield fell by approximately 5 basis points, while the 10-year yield fell by just below 10 basis points. Investments denominated in CNY earned a return of 0.7% in Q2.

0.7%

Petroleum buffer portfolio

The market value of the petroleum buffer portfolio was NOK 54.1bn at the end of 2026 Q2, an increase of NOK 2.1bn from Q1. During Q2, NOK 84.4bn worth of foreign exchange was purchased from the State's Direct Financial Interest (SDFI), and NOK 79.0bn worth of foreign exchange was transferred to the Government Pension Fund Global (GPFG). At the same time, the petroleum buffer portfolio sold NOK 4.9bn worth of foreign exchange.^{1,2} The return on the portfolio amounted to NOK 1.6bn, primarily reflecting a weaker krone exchange rate.

TABLE 5 Cash flow and return on the petroleum buffer portfolio

In billions of NOK. 2026 Q2. Positive values indicate net purchase/inflow of foreign exchange, while negative values indicate net sales/outflow.

	2026 Q2	2026 Q2	2026

¹ These cash flows are part of the petroleum fund mechanism. More information on the mechanism can be found on Norges Bank's website: <https://www.norges-bank.no/en/topics/liquidity-and-markets/Foreign-exchange-purchases-for-GPFG/>

² Norges Bank carries out foreign exchange transactions on behalf of the government and to fund the transfer of dividends to the government. The transactions are executed in the market as a daily net amount. Remaining amounts are transferred daily between the portfolios in the foreign exchange reserves.

Financial risk

The foreign exchange reserves are invested in foreign currency, while Norges Bank's liabilities are mainly denominated in NOK. This means that movements in the krone exchange rate will have a considerable impact on Norges Bank's earnings in NOK terms. A stronger krone will reduce the krone value of the foreign exchange reserves, while a weaker krone will increase the krone value. For contingency purposes, however, the krone value of the foreign exchange reserves will be of secondary importance. Excluding changes in the krone value, the financial risk associated with the foreign exchange reserves comprises market, credit and counterparty risk.

The foreign exchange reserves' market risk is determined by the composition of investments and movements in equity prices, interest rates and credit spreads. For equity and fixed income investments, expected absolute volatility at the end of 2026 Q2, excluding exchange rate movements, was 14.4% and 2.2%, respectively. Both equity and fixed income portfolios are managed to track the benchmark closely. At the end of Q2, expected relative volatility for equity and fixed income investments was 0.03 and 0.02 percentage point, respectively.

Credit and counterparty risk is defined as the risk of losses if issuers or counterparties default on payment obligations. The credit risk on bond and Treasury bill investments in the foreign exchange reserves is low. The lowest credit ratings from the three largest rating agencies, Fitch, Moody's and Standard & Poor's, are equivalent to AAA for Germany, AA+ for the US, AA- for the UK, A+ for France and A for China and Japan.

Expected relative volatility

Under the Executive Board's principles for the foreign exchange reserves, maximum expected relative volatility is set at 0.5 percentage point for both fixed income and equity portfolios. This means that the excess return is expected to be within ± 0.5 percentage point in two out of three years.

CHART 8 Expected absolute volatility

CHART 9 Expected relative volatility

Basis points. Including exchange rate movements. At month-end between June 2024 and June 2026

Commitments to the IMF

Pursuant to the Central Bank Act, Norges Bank shall administer the rights and obligations incumbent on Norway as a consequence of its membership of the International Monetary Fund (IMF). This membership entails a standing commitment to furnish foreign exchange for IMF loans to member countries.

Loan resource commitments under the quota, the New Arrangements to Borrow (NAB), bilateral agreements and the Poverty Reduction and Growth Trust (PRGT) totalled SDR 10 823m at 30 June 2026. At the end of 2026 Q2, the IMF had drawn SDR 1 546m and the total remaining amount that can be drawn under these arrangements is SDR 9 501m. The quota subscription, which determines a country's standing in the IMF, applies to all member countries, but participation in the funding of the IMF's borrowing arrangements is voluntary. The size and liquidity of the foreign exchange reserves are assessed to be sufficient to meet Norges Bank's international commitments.

Total commitments

SDR 10.8bn

Amount drawn

SDR 1.5bn

Special Drawing Rights

The SDR is an instrument the IMF can use to allocate international liquidity.

The value of the SDR is based on a basket of five currencies: USD, EUR, JPY, GBP and CNY.

At 30 June 2026, SDR 1 = NOK 13.46

TABLE 6 Details of IMF lending programmes. In thousands of SDRs

	Amount agreed	Amount drawn	Amount remaining	Change in amount drawn in 2026 Q2	Change in amount drawn in 2026
Total	10 823 080	1 546 095	9 500 501	27 496	-4 581
Quota	3 754 700	996 205	2 758 495	30 000	3 642
NAB	3 933 380	0	3 933 380	0	0

* The agreed amounts under the PRGT only include the 2020 and 2022 arrangements. The 2016 arrangement can no longer be drawn on. The same applies for the total remaining amount that can be drawn. Amount drawn includes all arrangements.

TABLE 7 Details of SDR holdings. In thousands of SDRs

	SDR allocations	SDR holdings	Remaining voluntary purchases	Change in holdings in 2026 Q2	Change in holdings in 2026
SDR holdings	5 161 781	5 569 759	2 172 913	77 386	77 933

Commitments to the IMF

Quota subscriptions are the IMF's primary source of funding and primarily reflect member countries' relative size in the global economy. Norway's quota subscription is SDR 3 755m. The amount drawn (reserve position) increased by SDR 30m in 2026 Q2.

CHART 10 QUOTA

In billions of SDRs

The NAB represents the IMF's second line of defence. Under the NAB, a number of member countries and institutions are committed to lending additional resources to the IMF. The IMF Executive Board must specifically decide to activate the NAB to fund new lending by drawing on the NAB. The government, represented by the Ministry of Finance, is the IMF's contractual counterparty. Commitments under the NAB amount to SDR 3 933m. No amounts were drawn from the NAB in 2026 Q2.

CHART 11 NAB

In billions of SDRs

Bilateral agreements serve as the IMF's third line of defence after quota subscriptions and the NAB. The current agreement entered into force on 1 January 2021 and has a borrowing facility of SDR 2 585m. In December 2024, the agreement was extended further until the quota increase under the IMF's 16th General Review of Quotas becomes effective or, at the latest, 31 December 2027. At the end of 2026 Q2, no amounts had been drawn on this agreement. Norges Bank is the IMF's contractual counterparty under the bilateral agreement. Norges Bank's borrowing agreements with the IMF are subject to the approval of the Ministry of Finance (cf Section 3-10, Subsection 2, of the Central Bank Act).

Reserve position

The reserve position is equal to the amount drawn on Norway's quota and corresponds to the difference between the quota and the IMF's krone deposit with Norges Bank.

Interest rate on the arrangements

Norges Bank receives SDR interest payments on the reserve position, the NAB, the PRGT and SDR holdings, and pays the SDR interest rate on SDR allocations. The SDR interest rate is a weighted average of the yields on three-month government securities in the countries/currency areas included in the SDR basket. The floor for the SDR interest rate is 0.05%. For the reserve position, an interest deduction is applied for any burden sharing.

Burden sharing mechanism

Under the burden sharing mechanism, member debtors and lenders share the cost of settling overdue obligations on outstanding credit to the IMF through an interest rate adjustment.

The basis for the calculation is the reserve position less SDR 60m. The reason for the deduction is that, prior to 1978, only 75% of the quota was included in the calculation.

The PRGT is the IMF's main vehicle for concessional financing for low-income countries, and the Ministry of Finance has signed borrowing arrangements with the PRGT. In 2016, Norway entered a borrowing arrangement for SDR 300m. The facility is fully drawn and under the arrangement, only repayments will be made. In 2020, a borrowing arrangement for SDR 400m was entered into. In December 2022, an additional borrowing arrangement for SDR 150m was entered into. In 2026 Q2, SDR 20m was drawn under the 2020 arrangement. Norges Bank is the agent for PRGT loans and administers the commitments.

CHART 12 PRGT agreements

In millions of SDRs

SDR holdings are allocated by the IMF to member countries. Member countries, the IMF and prescribed holders may change their SDR holdings by purchasing from or selling to each other. Some member countries and prescribed holders have entered into agreements with the IMF on participating in SDR trading arrangements intended to support SDR liquidity. In 2009, Norges Bank entered into such an agreement with the IMF on the voluntary purchase and sale of SDRs, as long as holdings remain within 50%–150% of SDR allocations. Thus, Norges Bank's holdings shall be between SDR 2 581m and SDR 7 743m. Purchases of SDRs are charged to the foreign exchange reserves. The agreement also gives Norges Bank the right to sell SDRs. As a result of voluntary SDR purchases and interest income from claims on the IMF, SDR holdings increased by SDR 77m in 2026 Q2. At the end of Q2, Norway's SDR holdings amounted to SDR 5 570m.

CHART 13 SDR holdings

In billions of SDRs

Prescribed holders of SDRs

Prescribed holders of SDRs are 20 official entities authorised by the IMF Executive Board to hold SDRs, although they do not receive SDR allocations.

Prescribed holders:

Four currency union central banks

- European Central Bank
- Bank of Central African States
- Central Bank of West African States
- Eastern Caribbean Central Bank

Twelve development institutions

- African Development Bank
- African Development Fund
- Asian Development Bank
- Caribbean Development Bank
- Development Bank of Latin America
- European Bank for Reconstruction and Development
- Inter-American Development Bank
- International Bank for Reconstruction and Development
- International Development Association
- Islamic Development Bank
- Nordic Investment Bank
- International Fund for Agricultural Development

Four intergovernmental monetary institutions

- Arab Monetary Fund
- Bank of International Settlements
- European Investment Bank
- Latin American Reserve Fund
