

## What to do with old banknotes?

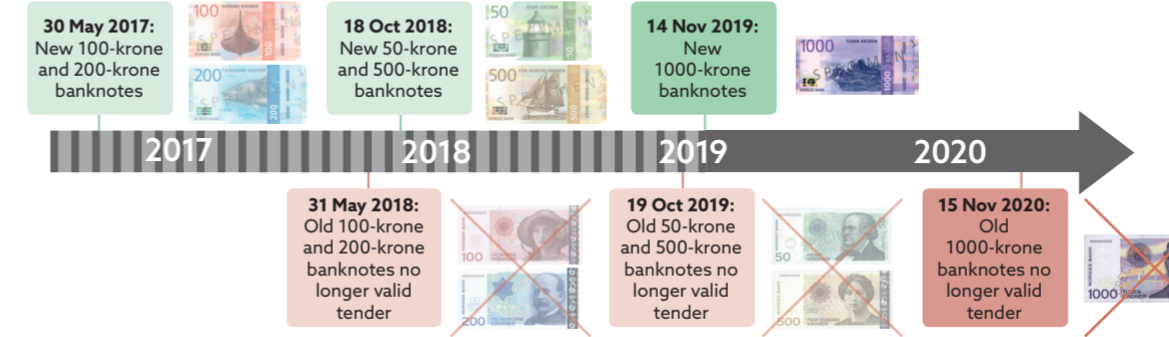

Once the new 1000-krone notes are put into circulation, you will still be able to use the old notes as a means of payment for a one-year period, ie up until 14 November 2020.

Make sure that you spend the old banknotes or deposit them in your bank account before 14 November 2020. You will not be able to exchange old 1000-krone notes at Norges Bank's depots during this one-year period.

After 14 November 2020, the old notes will be redeemable at Norges Bank for a minimum of 10 years.

## Launch timetable

## Look, tilt, feel

Get to know the new banknotes

## Norway's new banknote series

In 2019 the new 1000-krone note is launched. This is the last denomination of Norway's eight banknote series. The main motif symbolises the sea that brings us forward.

There are a number of security features to help you tell the difference between genuine banknotes and counterfeits. But in order for these security features to function as intended, you need to learn how to use them. The most important security features are described in this folder.

## Check that the banknote is genuine

The illustration shows the front of the new 1000-krone note. The security features intended for the public are the same on all denominations, except for the anchor chain, which is not on the 50-krone note.

## Look

### 1. Watermark

The watermark becomes visible when the banknote is held up to the light. The watermark shows the head of an Atlantic puffin and the value of the banknote. The puffin appears on all denominations.

### 2. Security thread

When the banknote is held up to the light, the security thread is visible as a dark line running through the paper. The security thread bears the text "NB" and the value of the banknote in small print.

## Tilt

### 3. Floating ring

In the lower-left corner of the note, there is a rectangle containing a ring. When you tilt the banknote in different directions, the ring appears to float and you can see a play of colours.

### 4. Running anchor chain

On the right-hand side of the 1000-krone banknote, you can see three segments of an anchor chain integrated into the paper. When you tilt the note, the chain appears to move.

## Feel

### Paper quality

The banknotes are printed on cotton paper, which feels different from ordinary paper. The cotton paper has been treated with a dirt-resistant coating, which gives it a smooth surface.

### Raised print

The primary motif and a number of details on the front are printed in intaglio, which can be felt. There are raised lines printed along the left and right edges of the notes to enable the blind and the visually impaired to distinguish between the denominations.

More information on Norway's new banknotes, security features and the transition to the new banknotes can be found at [nyesedler.no](https://nyesedler.no) and in the app "NyeSedler", which is available via the App Store or Google Play.

Updates on the new banknotes will be posted on our dedicated Facebook page:
